Product Features:

- Multiple ways to access: Fingerprint, Pin Code, RFID Card & Mechanical Key.
- Fingerprint: Advanced 360° scanner.
- Pin code: Elegant keypad with code scrambling feature. User can input random digits before actual code to avoid password peeping as lock supports code scrambling function.
- Dual authentication mode: After this setting dual authentication will be required to access the lock at same time to open the door, suitable for high security access. Dual authentication can be two user fingerprints, two RFID Cards or two pin codes. These can also be a combination of any two accesses from Fingerprint /Pincode or RFID Card.
- Master has the right to make different users. Lock can have 9 master users (can be fingerprint, pin code or card). Total user capacity is 250 with capping of 50 fingerprint users.
- Alarm: Tamper, low battery alarm and password protection.
- Lock will sound alarm in case of tampering with door or lock, when battery is low or when repeatedly wrong password is used.

Remarks:

1. After installation of lock please reset lock to factory default mode.
2. Handle is the key part for opening and closing door, and its flexibility ratio directly influences the usage of door lock, hence, don't hang articles on handle.
3. Gently press fingerprint on the fingerprint sensor for registration of fingerprint. Please don't press with great force to prevent scratching the fingerprint sensor.
4. This lock uses 4 AAA high-energy alkaline batteries (1.5V). When it prompts "the voltage is low, please replace battery" for the first time, the door can be opened for about 100 times as per different battery capacities; At this time, the battery should be replaced promptly to avoid inconvenience due to the exhausted battery.
5. After continuous 5 times wrong fingerprint, card or code usage lock will be locked for 90 seconds.

Operations:

1. **Reset factory default:** Press RESET at back of lock for 5 seconds, voice will prompt reset succeed.
